

FOR IMMEDIATE RELEASE

PDES, Inc. Website Offers EXPRESS Language training via EXPRESS Language Foundation.

Dallas, TX – 31 May 2023

PDES, Inc. now provides a direct link on its website providing free EXPRESS Language training. The training is provided by the EXPRESS Language Foundation, and is based on the foundational course developed by Peter Wilson in the mid 1990's. The training includes fundamentals and advance topics for the EXPRESS modeling language and EXPRESS-G graphical representation of that language. It is divided into modules, proving instructions, exercises, and examples. The EXPRESS language is an international standard, ISO 10303-11, and is the modeling language that is used for development of information models for the "ISO 10303 Industrial automation systems and integration — Product data representation and exchange" standard commonly referred to as the STEP standard.

"PDES has a long history of developing standards and methods for data exchange using EXPRESS and appreciates the opportunity to provide this link to the training hosted by the EXPRESS Language Foundation," said Patrick Walsh, Technical Advisory Committee Chair, PDES, Inc.

"The EXPRESS Language Foundation (ELF) language course was designed to introduce key concepts and practical scenarios to novices and experts alike, with experience gained in the aerospace, automotive and construction industries. We especially thank Peter Wilson, creator of the EXPRESS-G language and one of the initial developers of the EXPRESS language, for contributing this set of extensive learning material to the EXPRESS community," stated Thomas Thurman, President, EXPRESS Language Foundation

The EXPRESS Language Foundation (ELF) is committed to the continued suitability of the EXPRESS language in supporting the open and interoperable expression of information across domains. Its mission is to share the great success of the EXPRESS information modeling language with those who have vested interested in improving and extending ISO 10303 standards.

PDES, Inc. is a member-based consortium focused on the development and implementation of model-based standards to support the digital enterprise. Founded in 1988, the organization includes members from Industry, Government, and Academia. More information can be found at <https://pdesinc.org/>.
